

# Modular Elevator System

## ADDRESSING THE NEEDS OF THE INDUSTRY AND EXCEEDING EXPECTATIONS.

The Modular Elevator System is the future of the construction industry. With lead times stretching in the conventional elevator industry at a staggering 14 weeks sometimes, this system can reduce just your lead times by nearly 50%. Installation can be as little as one week.

- Self Supporting
- Fire Rated
- Pit Ladder
- Pit Light
- Pit GFCI Outlet
- Interior Finished
- Exterior Prepped for final finish
- Stamped Drawings
- Calculations Book

*“The Modular Elevator System is the future of the industry.”*

Each Modular Elevator System comes with stamped engineered drawings, a calculations book, self supporting 4x4 steel tubing structure, 1 or 2 hour fire rating, rubberized membrane roof, pit ladder, pit light, pit GFCI outlet and all elevator equipment completely installed, wired and ready for power, adjusting and final inspection on site.

# MODULAR ELEVATOR SYSTEM

## Competitive Commercial Elevator System

Applications:	New and Retro-Fit
Location:	Interior and Exterior
Equipment type:	Hydraulic and Traction
Elevator Equipment:	Non-Proprietary

Each modular elevator is custom built to meet specifications of every individual project. Modular elevators arrive on site with everything included. This allows for inspection in just a few days not weeks.

Modular elevators are safer than conventional elevators because they are assembled horizontally in a climate controlled warehouse. This allows for the workers to work at eye level with equipment and safety be on their feet. Once the elevator is on site and in place mechanics have a running platform to work from instead of having to run safety tie offs in an empty shaft, thus the fall hazard is almost non-existent. Since the door equipment is already installed the elevator is also safer for other trades to work around without a fall hazard.

With a modular elevator everything is installed off site in a climate controlled factory. This keeps our installers off site until the day of install. This also allows for the construction of the cab and the hoistway to be completed at the same time unlike traditional conventional elevator and shaft construction. Lead times of our modular elevator are as short as 8 weeks. Since our entire elevator is coming from one factory there is no wait time on multiple manufacturers for equipment. Once a modular is on site our mechanics can have the elevator up and running within a week.
